

GridBloom â AI Software for Grid-Scale Battery Storage
Seed pitch deck â July 2026
Founder & CEO: Ananya Iyer

Problem & Market

Renewable grids waste 18% of solar/wind energy because battery dispatch is scheduled manually and conservatively. Operators lose \$2.1B/yr to mistimed charge/discharge cycles and grid-frequency penalties.

Solution & Value Proposition

GridBloom is an AI dispatch engine that forecasts price, demand and weather to optimise every battery cycle.

Customers earn 22% more per MWh and cut curtailment 40%.

Drop-in software, no new hardware.

Market Size & Opportunity

TAM \$34B grid-storage software by 2030 (grid batteries growing 31% CAGR). SAM \$5.2B across India, US, EU. Beachhead: 900 utility-scale operators in India + US.

Product & Technology

Reinforcement-learning dispatch models + digital twin of each site. Sub-second control loop, 99.98% uptime.

3 patents filed on degradation-aware scheduling.

SOC 2 Type II and IEC 62443 certified.

Business Model & Unit Economics

SaaS: \$3k/MW/yr + 8% of arbitrage upside.

CAC \$28k, LTV \$410k (LTV/CAC 14.6x). Gross margin 82%.

Payback 6 months. Net revenue retention 140%.

Traction & Validation

42 sites live across 6 operators, 1.8 GWh under management.
\$2.4M ARR, growing 19% MoM. Two signed utility MSAs.
Pilot with a top-3 Indian power producer converted to a
5-year contract.

Competitive Landscape

vs legacy SCADA vendors (Fluence, Wartsila): we are hardware-agnostic and 10x faster to deploy.

vs in-house scripts: we deliver 22% more revenue, proven in head-to-head A/B trials at 3 sites.

Go-To-Market

Land via battery integrators (channel), expand to fleet.
11 integrator partnerships signed. Outbound to utility
heads of trading. Sales cycle 90 days, ACV \$260k.

Team & Execution

CEO ex-Tesla Autobidder lead (grid ML, 7 yrs).

CTO ex-DeepMind energy team. Head of Grid ex-Tata Power.

19 people, 11 engineers. Advisors from NREL and Breakthrough Energy.

Business Risks & Mitigation

Regulatory: market-design changes â mitigated by multi-market coverage. Concentration: top customer 24% of ARR, declining. Model risk: human-in-the-loop guardrails + insurance.

Business Attractiveness

High-margin, sticky infrastructure software riding a 31% CAGR tailwind, mission-critical to every renewable buildout. Clear path to \$50M ARR and category leadership.

Climate Impact & Integrity

Each 100 MW optimised avoids ~48,000 tonnes CO₂e/yr by displacing peaker gas plants. Portfolio to date: 210k tonnes CO₂e avoided. Verified via a third-party MRV methodology; no greenwashing â€” impact is metered, audited and reported.

The Ask

Raising \$6M seed at \$30M post.

20-month runway to \$12M ARR, 250 sites, US market entry.

Use of funds: 50% engineering, 30% GTM, 20% ops & compliance.
